Power Wheel® Model 9 Features

Power Wheel® Model 9 Features A2 Series Integral Parking Brake

GENERAL A2 SERIES DATA:

1. Maximum operating pressure is 3,000 psi (206.4 Bar). Pressure spikes or surges not to exceed 3,500 psi (240.8 Bar). Surge pressure in excess of 3,500 psi (240.8 Bar) caused by spikes in the hydraulic system could shorten brake life and must be avoided.
2. Use only SAE grade 8 mounting bolts and torque to 80-90 lb. ft. (108-122N-m) for motor mounting.
3. **PRECAUTION:** Bench testing may cause distortion of components or bolt failure. Mounting bolts must be used for supplemental clamping.
4. Minimum Release Pressure is defined as the hydraulic pressure required to obtain full running clearance.
5. Cubic Inch Displacement is the volume of oil required to release the brake piston 1.0 in³ (16.4cc) for a new brake and 2.0 in³ (32.8cc) for a worn brake pack.

PISTON:
Improved design for superior life at higher pressures

FRICION DISCS:
"Heavy Duty Graphitic Paper" for wet sump applications.
Characteristics:
Superior energy capability, high and stable coefficient of friction and smooth engagement.

BRAKE RATINGS

MOUNT	MODEL	HOLDING TORQUE	MIN. RELEASE PRESSURE	STYLE
SAE A & B	B1	1,540 lb-in (174 N-m)	190 PSI (13.1 BAR)	Short
SAE A & B	B2	1,800 lb-in (203 N-m)	220 PSI (15.1 BAR)	Short
SAE A & B	B3	2,400 lb-in (271 N-m)	290 PSI (20.0 BAR)	Short
SAE B	B4	2,400 lb-in (271 N-m)	160 PSI (11.0 BAR)	Long
SAE C	B4	2,400 lb-in (271 N-m)	135 PSI (9.3 BAR)	—
SAE A & B	B5	3,200 lb-in (362 N-m)	220 PSI (15.1 BAR)	Long
SAE A & B	B6	3,600 lb-in (407 N-m)	230 PSI (15.8 BAR)	Long
SAE C	B6	3,600 lb-in (407 N-m)	185 PSI (12.7 BAR)	—
SAE A & B	B7	4,200 lb-in (475 N-m)	260 PSI (17.9 BAR)	Long
SAE C	B7	4,200 lb-in (475 N-m)	210 PSI (14.5 BAR)	—

Maximum Release Pressure 3,000 PSI (206.4 BAR)

Model 9 Wheel Drives - Double Reduction

General Specifications

Max. intermittent output torque^{1,2}130,000 lb-in (14,690 Nm) Approximate Weight.....208lbs(94.3kg)
 Max. input speed²5,000 RPM Approximate Oil capacity..... 57 oz (1,685 cc)

For Lubrication Data, see Page 22

¹Depending on the duty cycle and the nature of the application, a normal continuous output torque of 1/3 to 1/2 of the maximum intermittent should yield satisfactory Power Wheel life. Customer testing and application analysis is strongly recommended.

²If application exceeds published limits, contact Auburn Gear.

Dimensions given in: INCHES (mm)

* "O" RING OR GASKET REQUIRED (Not Supplied by Auburn Gear)
 "O" RING SIZES: SAE "B" 2–155, SAE "C" 2–159

NOTE:
 The data presented in this catalog is for general information and preliminary layout purposes only. Auburn Gear, through its policy of continual improvement, reserves the right to update its products; therefore, the information presented is subject to change. For specific application and/or dimensional information, contact Auburn Gear.

NOTE:
 These curves are supplied as a design guide and apply to resultant radial load only. They indicate the importance of maintaining wheel position over the bearing center. For actual analysis, applications should be reviewed by Auburn Gear Engineering using data supplied on Application Data Form.

BEARING LOAD, LIFE AND SPEED RELATIONSHIPS

$$LF = \frac{SF \times R}{R'}$$

R = Allowable resultant load for given location from mounting flange

R' = Anticipated load at location from mounting flange

LF = Life Factor from table (see below)

SF = Speed Factor from table (see below)

OUTPUT SPEED (RPM)	SF	LF	BEARING HOURS B-10 LIFE
5	2.456	.584	500
10	1.994	.719	1000
20	1.620	.812	1500
30	1.435	.886	2000
40	1.316	.947	2500
50	1.231	1.000	3000
60	1.165	1.047	3500
70	1.113	1.090	4000
80	1.069	1.130	4500
90	1.032	1.166	5000
100	1.000	1.231	6000
200	.812	1.289	7000
300	.719	1.342	8000
400	.659	1.390	9000
500	.617	1.435	10000

CAUTION: The same torsional loading constraints used in the driving mode must be used in the braking mode when braking through the Power Wheel drive gear set.

Model 9 Spindle Output Drives - Double Reduction

General Specifications

Max. intermittent output torque^{1,2}130,000 lb-in (14,690 Nm) Approximate Weight 208 lbs (94kg)
 Max. input speed²5,000 RPM Approximate Oil capacity..... 57 oz (1,685 cc)

For Lubrication Data, see Page 22

¹Depending on the duty cycle and the nature of the application, a normal continuous output torque of 1/3 to 1/2 of the maximum intermittent should yield satisfactory Power Wheel life. Customer testing and application analysis is strongly recommended.

²If application exceeds published limits, contact Auburn Gear.

CAUTION: The same torsional loading constraints used in the driving mode must be used in the braking mode when braking through the Power Wheel drive gear set.

OUTPUT SHAFT OPTIONS

Boot Seal

An optional seal that protects the main oil seal from dirt and other debris. The boot seal will give extended life on applications operating in extremely muddy or dirty conditions. Boot seals are available on a selective model basis.

Weldable Hub

The hubs are 4140H steel and can be turned down and/or welded for mounting sprockets, pulleys, or other devices. A circular keeper plate secures the hub to the splined output shaft with two bolts (keeper plate and bolts included.)

KIT NUMBER	SPLINE	FITS MODELS
6420105	23T- ¹² / ₂₄	5, 6, & 8
6420106	23T- ⁸ / ₁₆	7, 8, 9, & 10
6420107	20T- ⁸ / ₁₆	8, & 9

Quick Disconnect

This optional disconnect is available on all wheel drives. No tools are needed to disengage the drive. The planetary drive is disengaged with the push of a button. The quick disconnect eliminates removal of the disconnect cover and external contaminants are sealed from the units by internal O-rings and a gasket that is sandwiched between the disconnect and planetary cover. The rugged, compact design ensures dependable service.

Guard and Boot Seal System

A boot seal and metal guard are available with the Model 9WB2 and 9WC2 wheel drives, as well as the 9SB2 and 9SC2 spindle output drives with the F5 spindle only. These can be ordered separately or together. They function best together. The guard and boot seal system are utilized in extremely high grit applications. The guard protects the boot seal from contaminants which will ultimately wear the boot seal lip.

LUBRICATION DATA

POWER WHEEL PLANETARY DRIVES ARE SHIPPED WITHOUT LUBRICANT AND MUST BE FILLED TO THE PROPER LEVEL PRIOR TO START-UP

1. Type

In normal application use an extreme pressure lubricant API-GL-5 approved. AGI recommends SAE 80W, 90, 80W-90 and 85W-90 grades of lube under normal climate and operating conditions. See chart below. For severe or abnormal applications with special requirements consult either Auburn Gear or a lubricant manufacturer for further assistance.

2. Change Interval

Initial lubrication change after 50 hours of operation. Subsequent changes every 1000 hours or yearly whichever occurs first.

3. Lube Temperature

Continuous operating temperatures of 160°F are allowable. Maximum intermittent temperature recommended is 200°F.

4. Amount of Lube

The unit should be half full when mounted horizontal. Lube levels for other mounts will vary. Consult Auburn Gear for details.

5. Shaft or Spindle Up Mounting

If mounting unit vertically with shaft or spindle up, special provisions apply to ensure adequate lubrication of output bearings. Consult Auburn Gear.

AUBURN GEAR POWER WHEEL LOW TEMPERATURE GEAR LUBE REQUIREMENT	
SAE VISCOSITY GRADE	AUBURN GEAR RECOMMENDED MINIMUM TEMPERATURE
75W-90	-40°F (-40°C)*
80W, 80W-90	-15°F (-26°C)*
85W, 85W-90	10°F (-12°C)*
90	35°F (2°C)

* Maximum temperature for Brookfield Viscosity¹ of 150,000 centipoise of (cP)² per SAE J306 MAR85

¹ Brookfield Viscosity - apparent viscosity as determined under ASTM D 2983

² 150,000 cP determined to provide sufficient low temperature lube properties for Auburn Gear Power Wheels

All Power Wheels® are compatible with synthetic lubricants as long as they meet the above specified parameters.

Power Wheel® Warranty

Seller warrants to Purchaser that its Power Wheel® planetary gear products are free from defects in material and workmanship under normal use and service for a period of one year from the date the product is shown to have been placed into operation by original user or for two years from date of shipment from seller's plant, whichever shall first occur.

Seller's obligation under this warranty is expressly limited to the repair or replacement at its option, of the Power Wheel which is returned with a written claim of defect f.o.b. seller's factory, Auburn, Indiana, U.S.A., and which is determined by Seller to be defective in fact.

THIS IS THE SOLE AND ONLY WARRANTY OF SELLER AND NO OTHER WARRANTY IS APPLICABLE EITHER EXPRESSED OR IMPLIED, IN FACT OR BY LAW, INCLUDING ANY WARRANTY AS TO MERCHANTABILITY OF FITNESS FOR A PARTICULAR USE OR PURPOSE.

The sole and only remedy in regard to any defective Power Wheel shall be the repair or replacement thereof herein provided, and seller shall not be liable for any consequential, special, incidental, or punitive damages, losses or expenses resulting from or caused by any defects.
